

**RELATIONSHIP BETWEEN OBESITY AND URATIC ACID CONCEPT IN
BLOOD IN AGE IN THE SOCIAL REHABILITATION CENTER OF AGE
BUDHI DHARMA BEKASI**

ABSTRACT

This research aims to determine the relationship between obesity and blood uric acid levels in the elderly at the Budhi Dharma Elderly Social Rehabilitation Center in Bekasi. This research was carried out on July 9, 2019 at the Budhi Dharma Bekasi Social Rehabilitation Center located at Jl. Hm. Djoyomartono No 24, Margahayu, East Bekasi Sub-district, Bekasi City, West Java 17113, with a sample of 24 elderly men and women over 60 years. The method used in this study is a survey method with bivariate correlation technique, which is an analysis technique to find out the relationship between two variables. The tools used in this study were weight scales, height meters, and gauges for uric acid levels. The data analysis technique of this research is the "r" Product Moment. The results of this study concluded that the r-count (0.864) is more than r-table (0.404) which means that there is a strong relationship between obesity and blood uric acid levels in the elderly at the Budhi Dharma Elderly Social Rehabilitation Center in Bekasi.

Keywords: *Obesity, uratic acid*
