

ABSTRACT

ANNISA FITRIANI. DEVELOPMENT OF PASSING volleyball LEARNING MODEL APPROACH TO PLAY FOR PRIMARY STUDENTS In MI.MMATHLA'ULHUDA BOGOR. Thesis: Jakarta, Recreational Sports, Fakultyas Sport Science, State University of Jakarta, in January 2016.

In general, the purpose of research and development is to produce a model of development pembelajaran passing volleyball for elementary school students. Research and Development (R & D) is using the Borg and Gall approach. Subject Research and development using a sample of 12 students for testing small group and 20 students for testing large groups in MI.Mathla'ulhuda Bogor.

Development of validated models of learning by learning experts receive an average percentage. Therefore, the development of learning models validated by expert physical education game has a very good value and can be used. Development of learning models validated by an educational media to get the average percentage. Therefore, the development of learning model has an excellent value and can be used. These results indicate the criteria very well and can be used in the learning process. While the instrument test results of a large group, passing bolvoli development models, developed by researchers, as a whole received an average percentage. The results show good criteria and can be used in the learning process.

To improve the results of creative and innovative guidebook required creative and innovative teachers in using educational media. Better learning can be seen from the products before making a guide book for learning, in which to make students interested in joining the learning process and this will make students easy to understand learning and doing fun for learners.

Keywords: Model Development of learning through play volleyball.
