ABSTRACT

The purpose of this research is to rate the Education Technology Student Association in applying Michael J. Marquardt's learning organization which consists of learning, organization, people, knowledge, and technology. This research uses the 360 degree work evaluation study model. This model is chosen for it is the most suitable model due to the variety of sources used in this research (supervisor, 10 members including the President of the Student Association of The Education Technology Program, 10 members of the DPM, as well as 10 active students of the Education Technology Program). The technique used in conducting this research is by spreading questionnaires to 31 respondents. Thus, the result of the research proves that all of the organized study subsystems has been done well by the Student Association of The Education Technology Program. The implication of this research may be used for evaluation by the Student Association of The Education Technology Program, and may be a reference to make the Student Association of The Education Technology Program as a learning organization.
