

EFFECT OF LEARNING OUTCOMES INQUIRY METHOD IPS CLASS V SDN RAWAMANGUN 01 JAKARTA

ABSTRACT

RAHMAWATI Hadijah

The purpose of this study to obtain empirical data class V student learning outcomes in learning to use the inquiry method and approach konvensional. This research was conducted at SDN 01 Rawamangun, East Jakarta, especially in class V, this study used the instrument as much as 20 PG matter. The instruments are calculated using normality test data using Liliefors test shows that the data are normal level. Then test the homogeneity in order to determine whether these two classes are homogeneous. After it was analyzed using t-test. Calculation shows that $t = 8.18$, while $t_{table} = 1.67$ at significance level $\alpha = 0.05$ means that the null hypothesis H_0 , H_1 research hypothesis is accepted. It can be concluded that there is a significant influence on the results of social studies using the inquiry method of the fifth grade students of SDN 01 Rawamangun East Jakarta
