**ABSTRACT**

*This Descriptive survey research aims to describe the career information class XI State Senior High School 11 Tangerang District, so as to assist the students in understanding of the career information in the future. This study was conducted in December 2014 - in May 2015. The study population was 440 students. The sampling technique used in this study is simple random sampling with a sample of 44 students. The scale used is Likert scale. Data analysis technique used is descriptive statistics with reliability of 0.867 means that the instrument is worth taking. The obtained data have been distributed by using categorization made by the class interval with the categories of high, medium, and low. The students who have high category amounted to 9 people with the percentage 20.45%, the students who have medium category amounted to 35 people with a percentage of 79.55%. Most are in the medium category with the characteristics of the knowledge and desire to plan careers and also gain information and concept about the world of working and decision-making ability in general which already exists, but it has not just been optimal yet to determine which will be lived as a career someday. The conclusion of this study is the information of career maturity class XI Senior High School Tangerang District is in medium category. The implications of this research is the guidance and counseling teacher at SMA Negeri 11 Tangerang District that are expected to utilize the available facilities in schools and society so that the students may have information about the optimal career. Hopefully this research can be used as a reference for future research related to the career information.*
