

TEENAGE VICTIMS OF BULLYING BEHAVIOR AT SMP PERGURUAN KSATRYA JAKARTA

Mega Jiunistari

ABSTRACT

The aim of this research is to get data regarding frequency of bullying effect that teenager feel at SMP Perguruan Ksatrya Jakarta. The method that used in this research is descriptive method which is using type survey. My research held at SMP Perguruan Ksatrya Jakarta with 31 teenagers grade VII as the sample that using purposive sampling. For my data analysis using statistic descriptive with percentage. The result of my research shown effect of bullying for teenagers at SMP Perguruan Ksatrya Jakarta in low category. It seeing from frequency distribution of bullying effect which is the low category until 54,85%. Implication of this research is we can not ignored the impact of bullying behavior since it can improve the low category into high category. However, if we assist bullying victims, the impact of bullying behavior could be healed.

Word Key: bullying behavior, victims of bullying, impact of bullying
