

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### 5.1 Conclusionax

In constructing the image of ISIS, based on the analysis in the chapter IV, the articles are analyzed by using M.A.K Haliday's Systemic Functional Linguistics theory through only one metafunction, Ideational metafunction, *Thejakartapost* used relational process as the dominant process. From the total 482 clauses from six articles, relational process with the amount of occurrence 248 times. Through relational process ISIS is represented as the brutal group who likes to kill and to act radically. From the six articles, most of all explain the amount of the victims who is being killed, wounded, and injured because of ISIS.

Beside relational process, there are also other dominant processes used to represent ISIS. They are material process which occurs 103 times, mental process which occurs 12 times, and verbal process which occurs 103 times. ISIS has been constructed negatively through material process (killing, wounding, struck, attacked, hitting and threatening) which is labeled to them. The author also used and quoted some testimonies from the victims, polices, witnesses, and also the direct speech of ISIS itself. So, the reader are easily influenced with these six articles while thinking about ISIS.

## 5.2 Suggestion

Although this study has many weaknesses, the writer hopes that this study can contribute to the language field, the study of the media discourse, and for those who are interested in conducting the research in media. The writer suggest to the people who wants to conducting the result in media, to be aware of the media's content because each of the media has their own way to convey the message and to construct the people mind.

The writer highly recommended to those who are interested in analyzing the Representation of something, to apply the Systemic Functional Linguistics (SFL) theory by M. A. K Halliday, because this theory provides the process in clause which makes research results more clearly.
