Lampiran 12

Teknik Perhitungan Uji-t Kehilangan Cairan Tubuh Saat Olahraga Menggunakan Alat EMS (*Electrical Muscle Stimulation*).

1. Hipotesis

a. $H_0 : \mu_1 = \mu_2$

Tidak terdapat perbedaan berat badan sebelum olahraga menggunakan alat EMS dengan berat badan setelah olahraga menggunakan alat EMS.

b. $H_1 : \mu_1 > \mu_2$

Terdapat perbedaan berat badan sebelum olahraga menggunakan alat EMS dengan berat badan setelah olahraga menggunakan alat EMS.

2. Mencari nilai Mean perbedaan rata-rata (M_D)

$$\begin{aligned} M_D &= \frac{\sum D}{n} \\ &= \frac{5,8}{20} \\ &= 0,29 \end{aligned}$$

3. Mencari Standar Deviasi perbedaan rata-rata (SD_D)

$$SD_D = \sqrt{\frac{\sum D^2}{n} - \left[\frac{\sum D}{n}\right]^2}$$

$$\begin{aligned}
 &= \sqrt{\frac{1,8}{20} - \left[\frac{5,8}{20}\right]^2} \\
 &= \sqrt{0,09 - (0,29)^2} \\
 &= \sqrt{0,09 - 0,0841} \\
 &= \sqrt{0,0059}
 \end{aligned}$$

$$SD_D = 0,076$$

4. Mencari nilai Standar *Error Mean* dari perbedaan rata-rata (SE_{MD})

$$\begin{aligned}
 SE_{MD} &= \frac{SD_D}{\sqrt{n-1}} \\
 &= \frac{0,076}{\sqrt{19}} \\
 &= \frac{0,076}{4,35}
 \end{aligned}$$

$$SE_{MD} = 0,017$$

5. Mencari t-hitung

$$\begin{aligned}
 t &= \frac{M_D}{SE_{MD}} \\
 &= \frac{0,29}{0,017}
 \end{aligned}$$

$$t = 17,05$$

6. Mencari nilai t-tabel

t-tabel dengan *degrees of freedom* (df) atau derajat kebebasan (dk)

= $n - 1$ pada taraf signifikan = 0,05

db = $n - 1$

= $20 - 1 = 19$

Nilai t-tabel pada taraf 0,05 = 2,09

7. Menguji nilai t-hitung terhadap nilai t-tabel dengan ketentuan sebagai berikut:

a. Jika t-hitung > t-tabel, maka H_0 ditolak

b. Jika t-hitung \leq t-tabel, maka H_0 diterima

Nilai t-hitung = 17,05 dan t-tabel 2,09

Maka nilai t-hitung > t-tabel menunjukkan bahwa hipotesis H_0 ditolak dan H_1 diterima.

8. Penarikan Kesimpulan

Nilai t-hitung = 17,05 dan t-tabel = 2,09 yang berarti t-hitung > t-tabel.

Dengan demikian terdapat efek kerja olahraga menggunakan alat EMS (*Electrical Muscle Stimulation*) terhadap kehilangan cairan tubuh pada member 20Fit SCBD.
