HALAMAN PERNYATAAN ......................................................................................................... iii
KATA PENGANTAR .................................................................................................................... iv
ABSTRAK ..................................................................................................................................... v
ABSTRACT ................................................................................................................................. vi
DAFTAR ISI ............................................................................................................................... vii
DAFTAR TABEL ........................................................................................................................ x
DAFTAR GAMBAR .................................................................................................................... xii
DAFTAR LAMPIRAN ................................................................................................................ xiv

BAB I PENDAHULUAN ............................................................................................................. 1
  1.1. Latar Belakang Masalah ........................................................................................................ 1
  1.2. Identifikasi Masalah ............................................................................................................. 3
  1.3. Pembatasan Masalah .......................................................................................................... 3
  1.4. Perumusan Masalah ........................................................................................................... 4
  1.5. Tujuan Penelitian ............................................................................................................. 4
  1.6. Manfaat Penelitian ........................................................................................................... 5

BAB II KAJIAN PUSTAKA ......................................................................................................... 6
  2.1. Landasan Teori ................................................................................................................... 6
    2.1.1. Definisi Analisis ........................................................................................................... 6
    2.1.2. Metode Penelitian ...................................................................................................... 6
    2.1.3. Komunikasi Wireless ................................................................................................. 8
    2.1.4. Spektrum Frekuensi Radio ...................................................................................... 10
###BAB I PENDAHULUAN

2.1.5. Frekuensi ISM ........................................................................................................ 11
2.1.6. Standar IEEE 802.11 .......................................................................................... 12
2.1.7. Model OSI .............................................................................................................. 14
2.1.8. Modulasi ................................................................................................................ 16
2.1.9. *Link Budget* ........................................................................................................ 18
2.1.10. *Quality of Service (QoS)* ................................................................................ 24
2.1.11. *Noise* ................................................................................................................ 25
2.1.12. Interferensi .......................................................................................................... 27
2.1.13. *Bit Error Rate* ................................................................................................. 29
2.1.14. *Access Point* ................................................................................................... 32
2.1.15. *Wireless Network Interface Controller* ........................................................ 33
2.1.16. Wavemon ............................................................................................................ 33
2.1.17. iPerf3 ................................................................................................................... 34

###BAB II LITERATURE REVIEW

2.2. Penelitian yang relevan .............................................................................................. 35
2.3. Kerangka Konseptual ............................................................................................... 37
2.4. Hipotesis Penelitian ................................................................................................ 39

###BAB III METODOLOGI PENELITIAN

3.1. Tempat dan Waktu Penelitian .................................................................................. 40
3.2. Definisi Operasional .................................................................................................. 40
3.3. Metode dan Rancangan Penelitian .......................................................................... 42
3.4. Perlakuan Penelitian ................................................................................................ 47
3.5. Instrumen Penelitian ................................................................................................ 51
3.6. Teknik Pengumpulan Data ....................................................................................... 53
3.7. Teknik Analisis Data ................................................................................................ 54
BAB IV HASIL PENELITIAN DAN PEMBAHASAN ........................................ 56

4.1. Deskripsi Data ...................................................................................... 56

4.1.1. Hasil pengukuran pada kondisi tidak ada interferensi ............... 56

4.1.2. Hasil pengukuran pada kondisi terinterferensi co-channel ............ 58

4.1.3. Hasil pengukuran pada kondisi terinterferensi adjacent channel .......... 60

4.1.4. Hasil pengukuran pada kondisi terinterferensi co-channel dan adjacent channel ............................................................................. 65

4.1.5. Hasil Perhitungan Signal to Noise Ratio (SNR) ......................... 69

4.1.6. Hasil Perhitungan Bit Error Rate (BER) .................................. 76

4.2. Pembahasan Hasil Penelitian ................................................................. 98

BAB V KESIMPULAN DAN SARAN ......................................................... 103

5.1. Kesimpulan .......................................................................................... 103

5.2. Saran ..................................................................................................... 104

DAFTAR PUSTAKA .................................................................................. 105

LAMPIRAN ................................................................................................. 108

DAFTAR RIWAYAT HIDUP .................................................................... 125
DAFTAR TABEL

Tabel 2.1. Pembagian Spektrum Radio .......................................................... 10
Tabel 2.2. Alokasi Frekuensi ISM untuk perangkat Wi-Fi ......................... 11
Tabel 2.3. Standar IEEE 802.11 PHY ............................................................ 13
Tabel 2.4. Model Referensi OSI (OSI Layer) ............................................. 15
Tabel 2.5. Besar redaman sinyal oleh obyek ............................................. 20
Tabel 2.6. 802.11ac Rx Sensitivity .............................................................. 23
Tabel 2.7. Tabel pengukuran pada kondisi terinterferensi co-channel .......... 60
Tabel 3.1 Keterangan log transmisi data iPerf3 ........................................ 50
Tabel 3.2. Spesifikasi Access Point TP-LINK Archer C20 V4.x .................. 51
Tabel 3.3. Spesifikasi PC Server ................................................................. 52
Tabel 3.4. Spesifikasi Laptop Client ............................................................. 52
Tabel 3.5. Spesifikasi Wireless Adapter ...................................................... 53
Tabel 4.1. Tabel pengukuran pada kondisi tidak ada interferensi ............ 58
Tabel 4.2. Tabel pengukuran pada kondisi terinterferensi adjacent channel .... 64
Tabel 4.3. Tabel pengukuran pada kondisi terinterferensi co-channel dan adjacent channel ................................................................. 68
Tabel 4.4. Tabel perbandingan perngukuran dan perhitungan SNR pada kondisi tidak ada interferensi ............................................................ 70
Tabel 4.5. Tabel perbandingan perngukuran dan perhitungan SNR pada kondisi terinterferensi co-channel ......................................................... 71
Tabel 4.6. Tabel perbandingan perngukuran dan perhitungan SNR pada kondisi terinterferensi adjacent channel ................................................. 73
Tabel 4.7. Tabel perbandingan pengukuran dan perhitungan SNR pada kondisi terinterferensi co-channel dan adjacent channel ....................................................... 76
Tabel 4.8. Rangkuman hasil pengukuran dan perhitungan ............................................. 98
Tabel 4.9. Tabel Perbandingan BER Perhitungan dan BER Simulasi ...................... 101
DAFTAR GAMBAR

Gambar 1.1. Jumlah Wi-Fi Hotspot di seluruh dunia .................................................. 2
Gambar 2.1. Model Komunikasi Wireless ................................................................. 8
Gambar 2.2. Perkembangan Teknologi Wireless ....................................................... 9
Gambar 2.3. Peningkatan laju data pada PHY 802.11 ........................................... 13
Gambar 2.4. Pembagian channel pada 802.11ac .................................................. 14
Gambar 2.5. Model referensi OSI dan IEEE ......................................................... 16
Gambar 2.6. Jenis-jenis modulasi digital ............................................................... 17
Gambar 2.7. Kurva perbandingan daya, noise, dan SNR ................................... 25
Gambar 2.8. Interferensi Co-Channel dan Adjacent Channel ............................ 27
Gambar 2.9. BER pada modulasi 4-QAM, 16-QAM, 64-QAM, dan 256-QAM .... 30
Gambar 2.10. Access Point TP-LINK Archer C20 V4 ........................................ 33
Gambar 2.11. Wireless Adapter TP-LINK Archer T2U ......................................... 33
Gambar 2.12. Tampilan aplikasi Wavemon v0.7.6-2 ........................................... 34
Gambar 2.13. Tampilan aplikasi iPerf v3.1.3 ....................................................... 35
Gambar 3.1. Diagram Alir Rancangan Penelitian .................................................. 43
Gambar 3.2. Skenario Pengukuran ........................................................................... 45
Gambar 3.3. Konfigurasi Access Point TP-Link Archer C20 .................................. 47
Gambar 3.4. Konfigurasi iPerf3 pada Server ........................................................ 48
Gambar 3.5. Konfigurasi iPerf3 pada Client ............................................................ 49
Gambar 3.6. Log transmisi data pada aplikasi iPerf3 ......................................... 49
Gambar 3.7. Konfigurasi Wavemon pada Client ..................................................... 50
Gambar 3.8. Data RSSI, Noise, dan SNR ............................................................... 51
Gambar 4.1. Scan Wi-Fi dalam keadaan tidak ada interferensi .................. 57
Gambar 4.2. Hasil pengukuran pada kondisi tidak ada interferensi ............. 57
Gambar 4.3. Hasil pengukuran pada kondisi terinterferensi co-channel, jarak AP 1 meter........................................................................................................... 58
Gambar 4.4. Hasil pengukuran pada kondisi terinterferensi co-channel, jarak AP 2 meter........................................................................................................... 59
Gambar 4.5. Hasil pengukuran pada kondisi terinterferensi co-channel, jarak AP 3 meter........................................................................................................... 59
Gambar 4.6. Hasil pengukuran pada kondisi terinterferensi adj-channel pada konfigurasi channel 157, jarak AP 1 meter............................................. 61
Gambar 4.7. Hasil pengukuran pada kondisi terinterferensi adj-channel pada konfigurasi channel 157, jarak AP 2 meter............................................. 61
Gambar 4.8. Hasil pengukuran pada kondisi terinterferensi adj-channel pada konfigurasi channel 157, jarak AP 3 meter............................................. 62
Gambar 4.9. Hasil pengukuran pada kondisi terinterferensi adj-channel pada konfigurasi channel 149, jarak AP 1 meter............................................. 62
Gambar 4.10. Hasil pengukuran pada kondisi terinterferensi adj-channel pada konfigurasi channel 149, jarak AP 2 meter............................................. 63
Gambar 4.11. Hasil pengukuran pada kondisi terinterferensi adj-channel pada konfigurasi channel 149, jarak AP 3 meter............................................. 63
Gambar 4.12. Hasil pengukuran pada kondisi terinterferensi co-channel dan adj-channel pada konfigurasi channel 157, jarak AP 1 meter .................... 65
Gambar 4.13. Hasil pengukuran pada kondisi terinterferensi co-channel dan adj-channel pada konfigurasi channel 157, jarak AP 3 meter .................... 66
Gambar 4.14. Hasil pengukuran pada kondisi terinterferensi co-channel dan adj-channel pada konfigurasi channel 157, jarak AP 2 meter .............................. 66
Gambar 4.15. Hasil pengukuran pada kondisi terinterferensi co-channel dan adj-channel pada konfigurasi channel 149, jarak AP 1 meter .............................. 67
Gambar 4.16. Hasil pengukuran pada kondisi terinterferensi co-channel dan adj-channel pada konfigurasi channel 149, jarak AP 2 meter .............................. 67
Gambar 4.17. Hasil pengukuran pada kondisi terinterferensi co-channel dan adj-channel pada konfigurasi channel 149, jarak AP 3 meter .............................. 68
Gambar 4.18. Kurva perbandingan BER terhadap E_b/N_0 ........................................ 99
Gambar 4.19. Kurva perbandingan BER dan E_b/N_0 pada simulasi MATLAB... 100
Gambar 4.20. Kurva perbandingan SNR terhadap Throughput.............................. 101
