ABSTRACT

Azizah Maharani. The Relationsip Between Women Workers and the Socioeconomic Condition in Shoes Factory (Correlational Study :Sindangpalay, Sukabumi City). Minithesis. Jakarta : Social Studies Educational, Faculty of Social Science, State University of Jakarta, 2016.

The purpose of this research is to determine the relationship between women workers and the socioeconomic condition in shoes factory. This research uses quantitative method with correlational study.

This research used a cluster sampling technique. The population of this research are women workers in GSI and PT. Pratama Abadi Industri (JX) shoes factory whom lives at Desa Sindangpalay.

In this research, found that the linear simple regression equation is $\hat{Y} = 36,563 + 0,619X$. The Pearson correlational coefficient of Product Moment found that $r_{xy} = 0,594$ which means there is a positive relationship or correlation between X variable (women workers) and Y variable (socioeconomic condition). Based on the calculation, the significance of correlational coefficient or t-test obtained that t_{count} (2,742) $> t_{table}$ (1,692), so it shows that there is a significant relationship between women workers in the shoes factory and the socioeconomic condition, so the coefficient of determination is 35%. And the rest in amount of 64,8% determined by other factors.

Key Words : *women workers, socioeconomic condition.*
